	Primary Examiner, Art U	nit 2194	

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argued in substance that:

As to the point (1), it does not even appear possible that the system of Nakamura could be Used for real-time event management as presently recited.

Examiner respectfully disagreed with Applicant's remarks:

As to the point(1), Suzuki teaches provide a controller capable of guaranteeing both real-time execution of control processing( para[0011], In 1-3) and Nakamura teaches a first microprocessor system including a first microprocessor, a first rewritable memory for storing a program and a first system bus connected to said first microprocessor and said first rewritable memory, said first microprocessor reading out the program stored in said first rewritable memory through said first system bus to execute the program read out; a second microprocessor system including a second microprocessor, a second rewritable memory for storing a program and a second system bus connected to said second microprocessor and said second rewritable memory, said second system bus being separate from said first system bus, and said second microprocessor reading out the program stored in said second rewritable memory through said second system bus to execute the program read out from said second rewritable memory, independently of execution by said first microprocessor, releasing said second system bus by said second microprocessor, in response to a request from said first microprocessor (col 7, In 50-67 to col 8, In 1-5).
